

Assignment

Before enrolling in 497R, you should have finished and submitted your Intro Project to your assigned graduate student mentor for approval to move on to 497R. If you haven't already, meet with your graduate mentor as soon as possible to receive feedback on your report and code. Then take that feedback and revise your Introductory Project code and report. Your revised code and report are your deliverables for this week.

Here are some general suggestions to improve your report:

- Did you include equations to describe the motion induced by a vortex?
- Do you understand everything that you wrote about, or did you make it up?
- What are the key relationships that you discovered?
- How did you demonstrate that you accomplished the project? Did you show it? Did you talk about it?
- Did you experiment with what parameters affect the model?
