

Airframe Design - Optimization: Part IV

Technical Tasks: Improved Optimization

You again will have seen or received feedback on potential areas of improvement for your optimization.

- a. With your graduate student mentor, identify at least one more area in which you can improve your optimization. Some more ideas include adding stall from 2d airfoil analysis or critical section theory, or including some stability factor into your design like limiting the pitching moment.

Writing Tasks: Results, Conclusion, and Abstract

Complete the following writing tasks:

- a. Complete a full draft of your results section, including well-designed plots and thoughtful discussion.
- b. With the main content of your paper completed, write the conclusion and abstract sections of your paper.
