

Rotor Design - Optimization: Part IV

Technical Tasks: Improved Optimization

You again will have seen or received feedback on potential areas of improvement for your optimization.

- a. With your graduate student mentor, identify at least one more area in which you can improve your optimization. Some more ideas include analyzing the AEP of the wind turbine (and adding pitch and TSR as design variables), or adding a surrogate structural constraint.

Writing Tasks: Results, Conclusion, and Abstract

Complete the following writing tasks:

- a. Complete a full draft of your results section, including well-designed plots and thoughtful discussion.
- b. With the main content of your paper completed, write the conclusion and abstract sections of your paper.
